

Innoseta is a H2020 Thematic Network project of 15 partners across Europe, which started in May 2018. The main objective of the project is to set up an Innovative self-sustainable Thematic Network on Spraying Equipment, Training and Advising to contribute in closing the gap between the available novel high-end crop protection solutions with the everyday European agricultural practices.

Throughout the first months of the project, Innoseta has been presented at a number of national and international events drawing the attention of the crop-protection community, as well as the agri-food and agricultural machinery world.

- At this phase of the project, Innoseta partners are interviewing farmers across Europe to inquire about their use and adoption of innovative spraying equipment.
- 3 Regional workshops in each one of the 7 Hubs, 3 transnational and 2 brokerage events are going to take place between 2019 and 2020 → **Exact dates and locations will be announced soon!**
- Our next newsletter will follow in the spring of 2019. In the mean time you can follow our progress on our website and through out social media channels!
