# INNOSETA : A new European Horizon 2020 thematic network for innovation in application techniques, spraying practices and training

**Main Objective: closing the gap between the available innovative crop protection solutions and technologies and the everyday EU agricultural practices.**

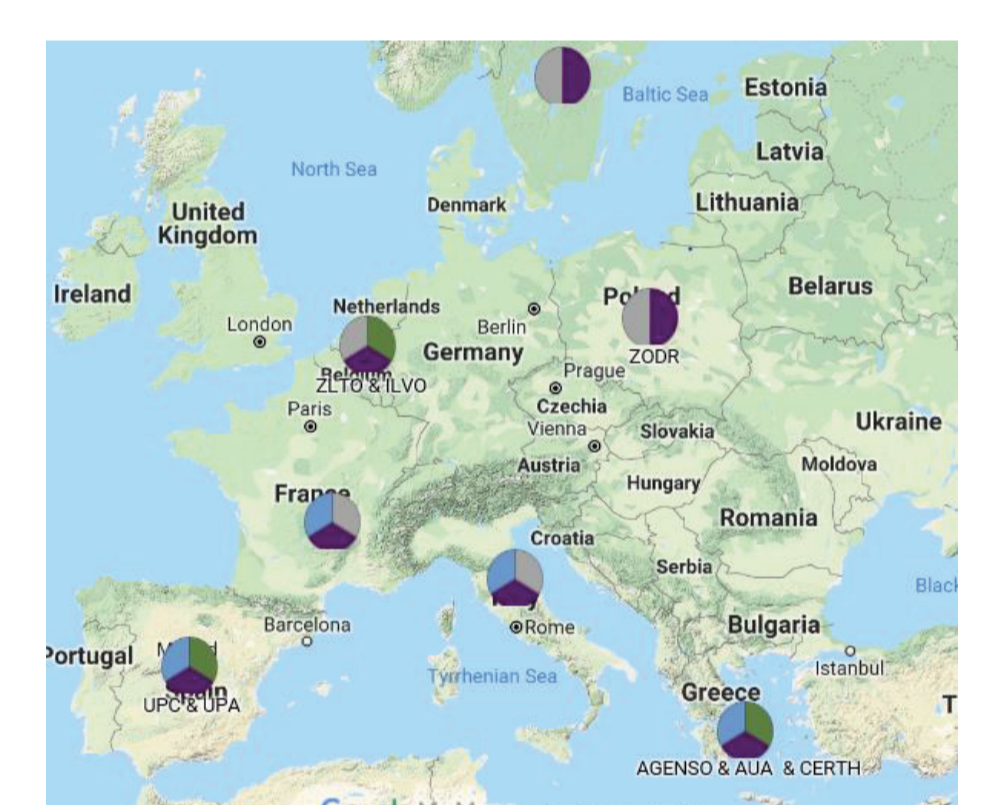

INNOSETA H2020 Thematic network (May 2018 - April 2021) aims at promoting effective exchange of novel ideas and information between:

- Create an inventory of directly applicable SETA (Spraying Equipment and Technologies, training materials and Advisory)
- Assess the SETA end-users needs and interests and identify factors influencing adaptation
- Engender interactive multi-actor, innovation-based collaborations among different stakeholders
- Develop interactive ICT tool for the on-line assessment of the Spraying equipment, training and advising materials and allow crowdsourcing of grassroots-level ideas and needs

## 15 partners in Europe for a multi-actor approach

Different kind of organizations from 8 countries (research institutes, extension services, crop protection association, union of machinery manufacturers).

**Knowledge sharing and stimulation of multi-actor innovation through the creation of a web platform and a range of multi-actor workshops.**

Comprehensive inventory of 100 innovative SETA solutions at European scale.

Assessment by partners and availability of solutions on INNOSETA interactive web platform.

For each country, 3 interactive multi-actor workshops with stakeholders involved in plant protection and spraying for direct dissemination of SETA solutions, capture of grassroot level innovations and farmer's needs.

3 transnational workshops will be held in order to generate targeted exchanges, develop cross-fertilization and cross border collaborations in SETA innovations. These events will be followed by 2 brokerage events in Brussels in order to initiate possible new research and implement dissemination activities.
